UI Mock Up: (estimated hours = 5)

Provide User interface and linkage for UI for both Accommodation Specialist and Members using Balsamiq

1. Accommodation Specialist

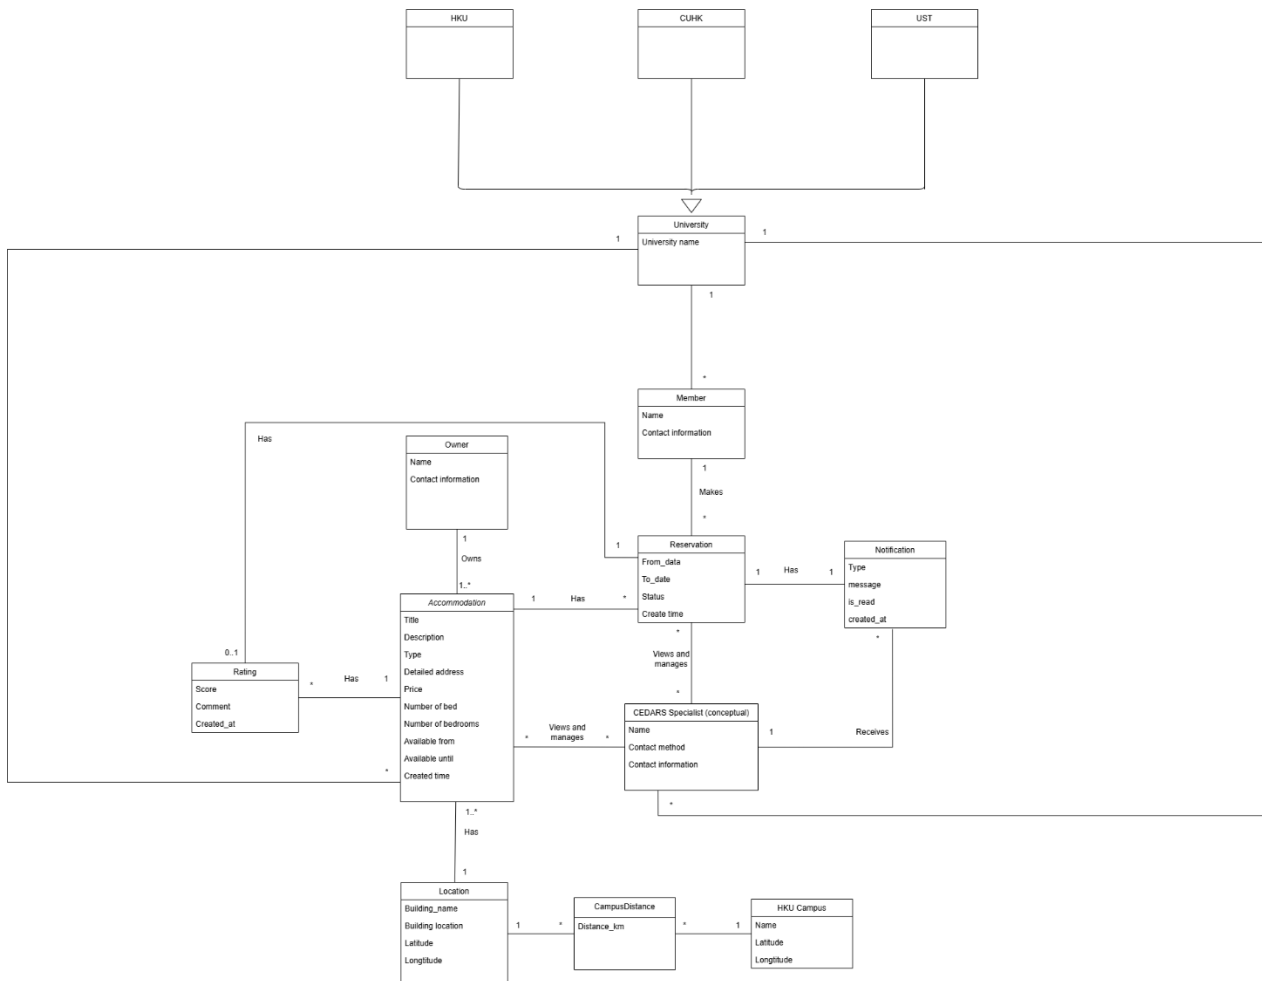

- i. UI for Specialist selecting university
- ii. UI for Specialist Main page for selecting different actions and provide notification
- iii. UI for Specialist create Accommodation
- iv. UI for Specialist view and search Accommodation
- v. UI for Specialist edit and view details of Accommodation
- vi. UI for Specialist make reservations
- vii. UI for Specialist confirm making reservations
- viii. UI for Viewing reservations and removing reservations

1. Members

- i. UI for Member selecting university
- ii. UI for Member Main page for selecting different actions
- iii. UI for Member to search for accommodations
- iv. UI for Member to view details of accommodations
- v. UI for Member to make reservations
- vi. UI for Member to confirm making reservations
- vii. UI for Member to view reservations
- viii. UI for Member to confirm cancellation of reservations
- ix. UI for Member to select accommodation for rating
- x. UI for Member to rate accommodation in a form
- xi. UI for Member to confirm making rating

Domain model revise: (estimated hours = 2)

Add new class of University for distinguishing the specific Unihaven system for user from specific school.

Providing Testing for UniHaven (estimated hours = 30)

1. Testing on distance calculations
 - i. Testing distance between two points
 - ii. Testing distance when points are the same
 - iii. Test distance calculation along north-south axis
 - iv. Test distance calculation along east-west axis
2. Testing the University API endpoints
 - i. Testing to retrieve a list of universities
 - ii. Testing to retrieve a single university
 - iii. Testing to create a new university
 - iv. Testing to update a university
 - v. Testing to delete a university
3. Testing the Location API end points
 - i. Testing the address lookup endpoint
4. Testing the accommodation API endpoints
 - i. Testing to retrieve a list of accommodations
 - ii. Testing to retrieve a single accommodation
 - iii. Testing to creating a new accommodation
 - iv. Testing to update accommodation
 - v. Testing to delete accommodation
 - vi. Testing to filter accommodation by university
 - vii. Testing to filter accommodations by distance from campus
 - viii. Testing to sort accommodations by distance from campus without max_distance
5. Testing the Reservation API endpoints
 - i. Testing to retrieve a list of reservations
 - ii. Testing to retrieve a single reservation
 - iii. Testing to create a new reservation
 - iv. Testing that overlapping reservations are rejected
 - v. Testing that reservations outside the accommodation's availability period are rejected
 - vi. Testing to cancel a reservation
 - vii. Testing to confirm a reservation
 - viii. Testing to completing a reservation
 - ix. Testing that only confirmed reservations can be completed
 - x. Testing to filter reservations by university
6. Testing the Rating API endpoints
 - i. Testing to create a rating for a complete reservation
 - ii. Testing that user cannot rate accommodation with pending reservations
 - iii. Testing that user cannot rate same accommodation twice

7. Testing the notification API endpoints
 - i. Testing to retrieve a list of notifications
 - ii. Testing to retrieve a single notification
 - iii. Testing to mark notification as read
 - iv. Testing to filter notifications by university
